TABLE OF CONTENTS-WEEKLY HEALTH REPORT	53
--	----

WEEKLY HEALTH REPORT

NATURE OF THE DATA

The data presented here are taken from the Statistical Health Reports, WD AGO 8-122, rendered weekly to the Office of The Surgeon General by every hospital and separate dispensary in the continental United States. Troops in transit and certain small detachments are not required to submit reports; for this and other reasons, total strength of reporting units has been consistently about 1 percent below the actual strength of the Army in this country. The mean strength shown for individual stations is that of Army personnel attached or assigned for medical care and does not include organizations not on the post but dependent on the station for hospitalization.

Because of the desirability of placing the information in circulation at the earliest possible time following its receipt, figures are in general shown herein as reported. Where there is some doubt as to the accuracy of the reported figures, their verification is requested, and the fact that they have been so questioned is indicated by the symbol (!).

MORBIDITY DATA

Admissions are reported only for cases admitted to a medical installation (either to hospital or quarters) and not returned to duty within the same day, except for certain cases carded for record only (chiefly venereal disease cases treated on duty status, and deaths which occurred before admission to hospital or quarters). Admissions designated as "injury" comprise all "new" traumatisms (i.e., morbid conditions due to external causes, including poisons taken internally, results of exposure to heat, cold and light, as well as various types of wounds not due to enemy action) other than battle casualties. Under present conditions there would not be any direct admissions in the continental United States properly classifiable as battle casualties. All cases other than those of injury or battle casualty are classified as "disease."

Admission rates are shown for all causes combined, for all diseases combined, for injuries and for a few specific diseases. These rates are presented on an annual basis to facilitate comparisons with corresponding rates in annual and monthly reports. Such annual rates of admission indicate the number of admissions per thousand mean strength which would occur over a year's time if the current week's experience continued for a year.

The report also shows the number of cases of the more common communicable and certain other diseases of special interest. It may be noted that under the term infectious hepatitis are included cases reported as jaundice and cholangitis. Appended is a list of cases reported for the rarer communicable and certain other diseases.

The average proportion of the daily strength of the command which is confined to hospital or quarters (mean number of non-effectives per thousand strength) is given in the summary table for the total United States and for each of the Service Commands. More significant is the estimated non-effective rate for personnel stationed in the United States shown in the chart on page 7.

The number of enlisted men discharged during the week on Certificates of Disability for Discharge (CDD) are shown for individual stations. These data should be distinguished from the figures for "honorable discharges for physical and mental disqualification" assembled by The Adjutant General's Office; the latter include discharges for inaptness in addition to CDD's and are tabulated on a somewhat different basis (e.g., the April data represent April discharges processed by the AGO during April and May plus discharges prior to April which were processed in May).

In making comparisons between Service Commands it should be borne in mind that morbidity rates naturally tend to be higher in those Service Commands which have a relatively large number of General Hospitals and Ports of Embarkation. The presence of sizeable numbers of troops not under the jurisdiction of a Service Command (e.g. casualties, task force troops, etc.) affects the interpretation of the data from the viewpoint of Command responsibility.

MORTALITY DATA

Recent studies indicate that the reporting of deaths on WD AGO 8-122 is incomplete, especially in the case of deaths from injury. The resulting understatement in the mortality rate from injury may be as much as 10 percent and occasionally even more, but the death rate from disease is not materially understated. Therefore in computing mortality rates from injury and from all causes on the basis of the corresponding numbers of deaths, as shown in this report, an appropriate adjustment for the underreporting of such deaths must be made.

STATIONS WITH HIGHEST MORBIDITY RATES

Included in the report is a table listing the stations (having strength of 5000 or over) with the highest morbidity rates from all causes, from all diseases combined, from injuries, and from a few specific diseases. Not infrequently, the excessively high rates of admission for all causes and for all diseases combined reported from reception centers reflect a large number of venereal disease cases among newly inducted men. Therefore, more significant of high morbidity from disease are the rates of admission for disease excluding venereal infections existing prior to induction, which rates are also shown in the table. It should also be noted that reception, redistribution, and separation centers frequently report relatively large numbers of admissions arising from routine physical examinations of large bodies of troops.

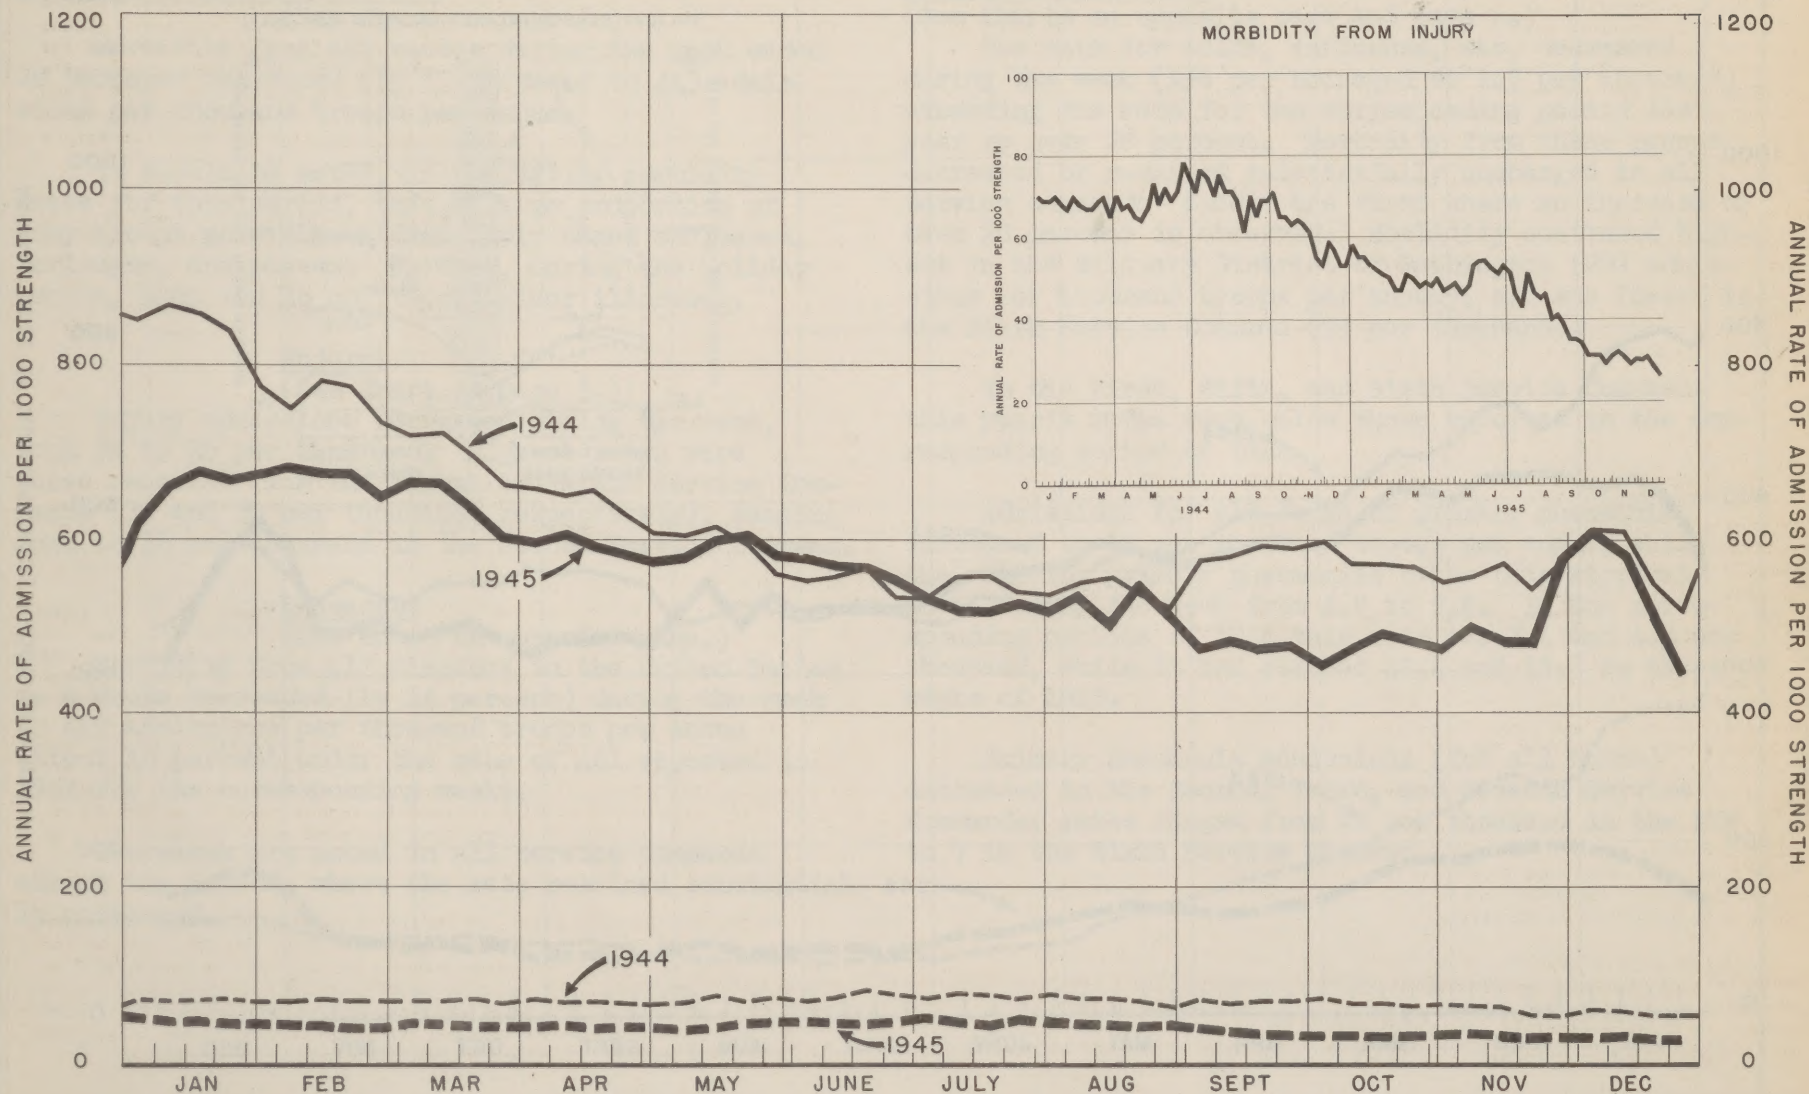

EXPLANATORY MATTER

In reading the detail tables, it should be born in mind that admission rates based on small numbers of cases are not reliable. For this reason the symbol (?) is placed after admission rates computed on the basis of 5 or fewer cases.

Where the current week's data for a particular station have not been received, the latest available figures are substituted therefor and the symbol (#) is placed after the name of the station.

COMMENT ON CURRENT TRENDS

MORBIDITY FROM: All Causes:

(See Chart on page 3.)

Morbidity from all causes during the week ended 28 December decreased (by 13 percent) to 443 admissions per thousand troops per annum.

It should be noted, in evaluating morbidity rates for this period, that a large proportion of Army troops were absent from their bases on leaves, furloughs, and passes. Further, during the holiday season, many men do not report minor illnesses.

Injury:

(See Chart on page 3.)

Injury admissions decreased during the week, from 28 to 26 per thousand. Highest rates were those reported from the Eighth and Ninth Service Commands (32 and 36 per thousand, respectively), ranging down to 16 per thousand in the Second Service Command.

Diseases:

(See Chart on opposite page.)

Morbidity from all diseases in the United States as a whole decreased (by 14 percent) during the week to 417 admissions per thousand troops per annum (about 10 percent under the rate of 461 reported in 1944 for the corresponding week).

Decreases are noted in all service commands except the Second, where the rate remained substantially unchanged.

Respiratory Diseases:

(See Charts on opposite page and page 6.)

The rate for colds, influenza, etc, decreased during the week (156 per thousand to 143 per thousand) exceeding the rate for the corresponding period last year by over 20 percent. Morbidity from these causes decreased or remained substantially unchanged in all service commands except the First where an increase of over 20 percent is observed. Morbidity continued highest in the Military District of Washington (292 admissions per thousand troops per annum), and was lowest in the Sixth Service Command (99 per thousand).

In the First, Fifth, and Sixth Service Commands this year's rates were below those reported in the corresponding period of 1944.

Admissions for all forms of primary pneumonia increased to 15 per thousand troops per annum, while the rate for primary pneumonias other than atypical moved during the week from 4.8 to 5.8. In the corresponding periods of 1944 this rate was 3.4 and 4.4 per thousand, while it had reached 12.4 and 13.3 in these weeks of 1943.

Primary pneumonia admissions (for all forms) decreased in the Second, Third, and Seventh Service Commands; rates ranged from 23 per thousand in the MDW to 7 in the Sixth Service Command.

COMMENT ON CURRENT TRENDS (CONT.)

Venereal Diseases:

New admissions for non-EPTS venereal diseases decreased during the week from 50 to 41 per thousand troops. The rate increased in the Second and Sixth Service Commands; morbidity incidence ranged from 58 new admissions per thousand troops in the Second Service Command to 15 per thousand in the First.

Other Communicable Diseases:

Incidence of diarrhea and dysentery dropped to 3 admissions per thousand troops per annum; no rates above 4 per thousand were reported.

NONEFFECTIVE RATE:

(See Chart on page 8.)

The noneffective rate for personnel stationed in the continental United States is estimated at 32.5 per thousand troops per day for the week ended 28 December as compared with 32.7 per thousand for the corresponding week of 1944.

PATIENTS REMAINING UNDER TREATMENT: 28 DECEMBER 1945:
(See Chart on page 8.)

The number of patients remaining in hospital in the Zone of Interior, including patients transferred from overseas, increased during the week to 159,465 as compared with 157,985 at the end of the previous week.

The number of neuropsychiatric cases remaining was 11,144 or about 133 fewer than at the end of the previous week. Non-battle injury patients remaining numbered about 28,091. The number of battle casualty patients remaining decreased by about 650 to 42,302.

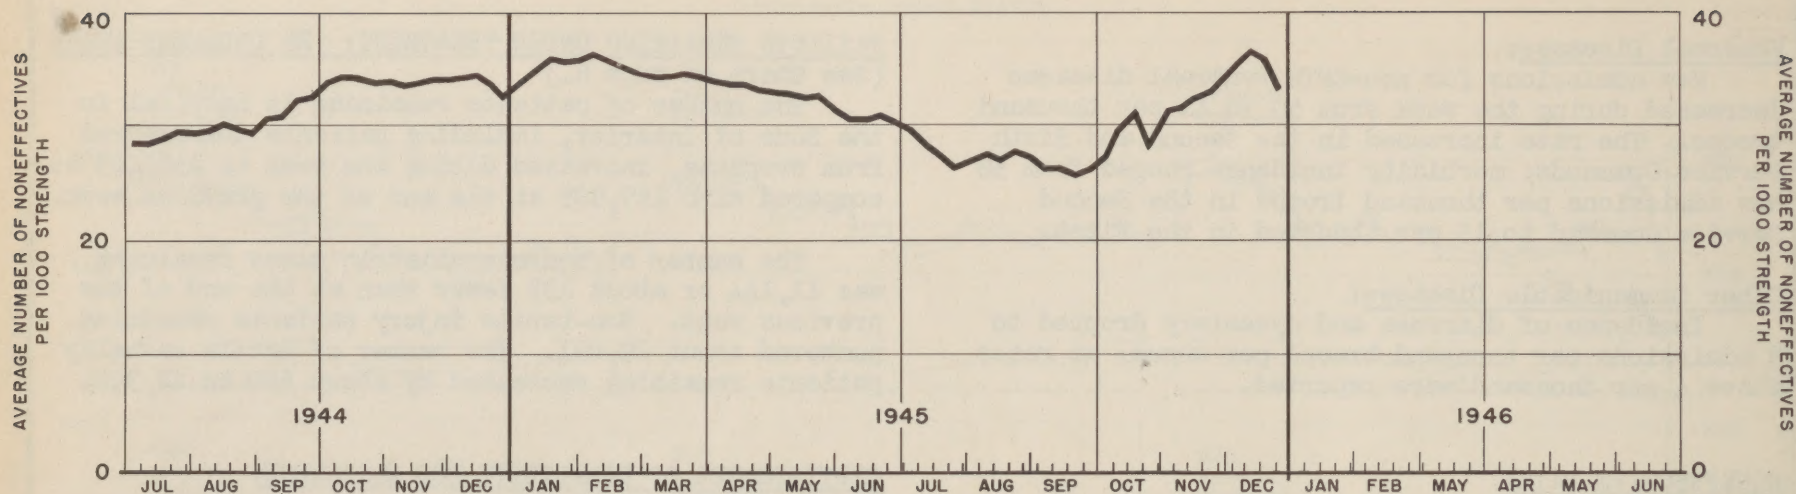

CERTIFICATES OF DISABILITY FOR DISCHARGE:

(See Chart on page 9.)

In the week ended 28 December there were 2582 enlisted personnel discharged by CDD (4507 less than in the previous week). Fifty-seven percent of these discharges were reported by general hospitals and 24 percent by convalescent hospitals. Among these CDD's were 410 neuropsychiatric cases, about 800 less than in the previous week.

COMMENT ON RECENT DEVELOPMENTS

FOR THE FIVE-WEEK PERIOD ENDED 30 NOVEMBER 1945

NATURE OF THE DATA:

The data of this Monthly Report, like those of the Weekly Health Reports, have been taken from WD AGO Forms 8-122 rendered weekly to the Office of The Surgeon General by every hospital and separate dispensary in the continental United States. However, unlike the Weekly Health Reports which are compiled on the basis of the figures as received, so as to place the information in circulation at the earliest possible time, the figures here presented for the five week period ended 30 November 1945 include the great majority of the corrected reports as well as reports received too late to be incorporated in the Weekly Health Report.

This report covers morbidity and mortality data for all individual stations with a strength of 1000 or over and gives details for admissions from venereal diseases and for neuropsychiatric cases.

Charts showing morbidity trends from all causes, from all diseases combined, from injury, and from colds, influenza, etc., are presented on page 22. Similar charts for specified diseases appear on pages 24, 25, and 26. A chart showing mortality trends is presented on page 29. A summary for the month of the number of admissions and corresponding morbidity rates and of the number of deaths and corresponding mortality rates for the United States as a whole and for the service commands is given on pages 30 and 31. The most pertinent morbidity data for individual stations are presented on pages 32 to 50. On pages 51 and 52 the seven stations with the highest rates of admission during the month are shown for each of the morbidity categories considered.

In reading the detailed tables, it should be borne in mind that morbidity (or mortality) rates based on small numbers of cases are not reliable. For this reason the symbol "?" has been placed after rates computed on the basis of 5 or fewer cases. Attention is invited to the definitions of admissions and admission rates and the discussion of the proportion of total Army strength included in the stations covered by this Report as given on page 2. The term "month" in this report is used to denote the four or five-week period based on the number of Fridays in the calendar month.

MORBIDITY FROM ALL CAUSES, DISEASE, AND INJURY:

The admission rate for all causes for the Army in the continental United States increased to 504 during November, as compared with 474 for the previous month. The rate for diseases increased to 474 per thousand per year, while that for injuries decreased from 31 in October to 30 in November.

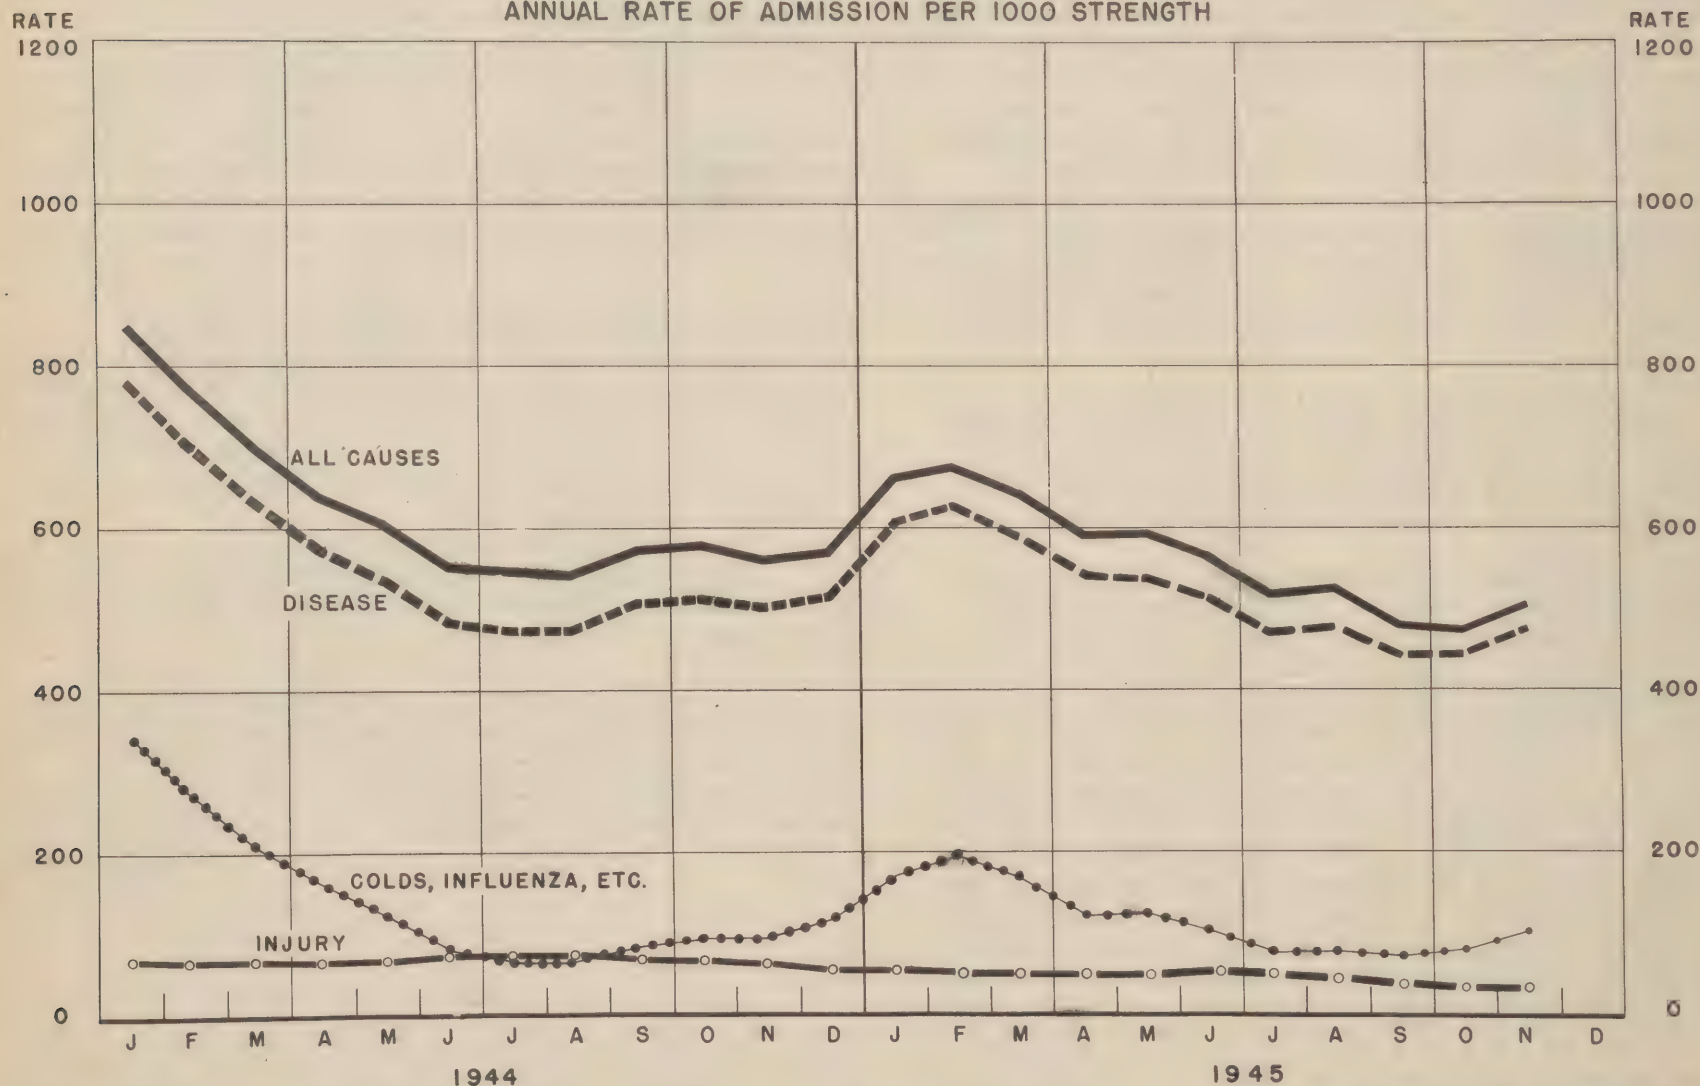

Disease admission rates increased during November in all service commands except the Ninth and the Military District of Washington.

The admission rate for injury increased in the First, Fifth, and Eighth Service Commands and the MDW. Highest morbidity from injury was reported in the Fourth and Ninth Service Commands, with rates of 33 and 36 per thousand, respectively.

MORBIDITY FROM — ALL CAUSES — DISEASE

— INJURY — COLDS, INFLUENZA, ETC.

CONTINENTAL UNITED STATES
ANNUAL RATE OF ADMISSION PER 1000 STRENGTH

COMMENT ON RECENT DEVELOPMENTS (CONT.)

RESPIRATORY DISEASES:

During November the admission rate for common respiratory diseases increased by over 25 percent (79 per thousand to 101 per thousand). The rate of 93 per thousand reported for November, 1944, is 9 percent under that reported for the current month.

Increases in admission rates from these causes were reported from all service commands, ranging from 3 percent in the Eighth Service Command to over 50 percent in the Third, Sixth, and Seventh. Lowest rate (74 per thousand) was reported by the First Service Command, highest (155 per thousand) from the MDW.

Morbidity from all forms of pneumonia increased from 8.3 per thousand in October to 10.1 in November as compared with 9.2 in November of last year. The rate for "atypical" pneumonia moved from 6.2 in October to 7.3 per thousand in November. Decreases in the rates for all forms of pneumonia took place in the First, Third, and Fifth Service Commands, and the MDW. Atypical pneumonia rates decreased in the Third and Fifth Service Commands and the MDW; however, the rate for primary pneumonias other than atypical moved from 3.1 to 4.1 per thousand in the Military District. Highest admission rates for all forms of primary pneumonia were those reported from the Second Service Command (13.2 per thousand) and the MDW (13.1 per thousand).

DIARRHEA AND DYSENTERY:

Morbidity from diarrhea and dysentery remained at 4 per thousand in November, the rates continuing much lower than those reported in the same periods last year. The First and Ninth Service Commands and the MDW reported rates in excess of 5 per thousand per annum.

VENEREAL DISEASES:

Morbidity from venereal diseases, excluding cases contracted prior to entry into service, remained high, increasing to 60.3 as compared with 56.4 per thousand in October.

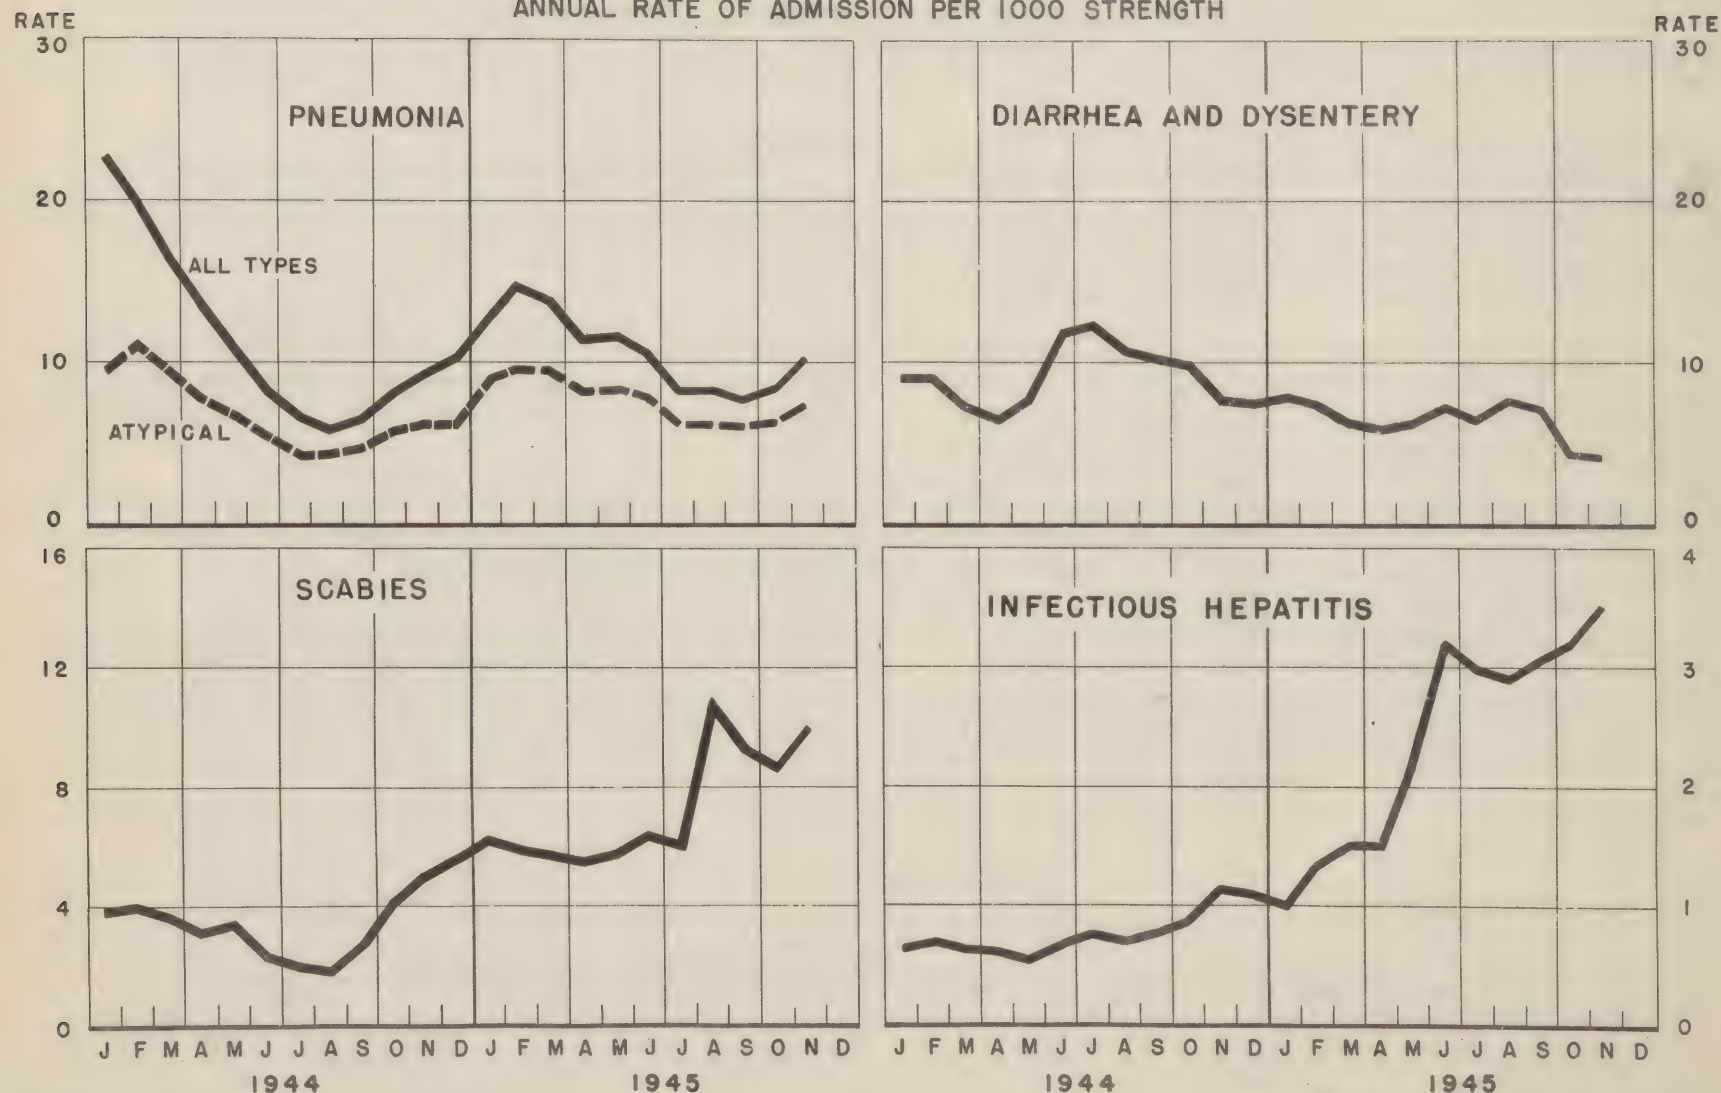

The rate for syphilis acquired while in service increased from 6.7 per thousand in October to 8.7 in November, while that for venereal diseases other than syphilis and gonorrhea moved from 1.3 per thousand to 1.9.

Venereal disease rates increased in all service commands, except the Seventh and Ninth, where the rates did not move significantly.

Morbidity represented by venereal EPTS cases was reported at 3.7 per thousand during November as compared with 3.4 per thousand in October. The average weekly number of venereal EPTS cases in November was 190, as compared with 217 in October.

MORBIDITY FROM — RHEUMATIC FEVER — TUBERCULOSIS MALARIA — NEUROPSYCHIATRIC CAUSES

CONTINENTAL UNITED STATES
ANNUAL RATE OF ADMISSION PER 1000 STRENGTH

COMMENT ON RECENT DEVELOPMENTS (CONT.)

SCABIES:

The admission rate for scabies increased from 8.7 in October to 10.0 per thousand in November. Indications are that recent sharp increases in scabies admissions are consequences of examinations of personnel returned from overseas, prior to temporary duty or discharge.

INFECTIOUS HEPATITIS:

Morbidity from infectious hepatitis increased to 3.5 per thousand from 3.2 in October.

MEASLES:

Morbidity from measles decreased to 16 cases per week during November as compared with 26 weekly cases in October. The rate moved from 0.4 to 0.3 per thousand.

MUMPS:

Morbidity from mumps increased from 1.1 per thousand to 1.4 during November.

SCARLET FEVER:

Morbidity from scarlet fever was reported at 0.4 per thousand in November as compared with 0.5 per thousand in the same month last year. The Third Service Command and the MDW reported a rate of 0.6 per thousand.

MENINGOCOCCIC MENINGITIS:

Morbidity from meningitis was reported at 0.2 per thousand in November. Current experience contrasted with a rate of 0.3 during the corresponding period of 1944.

RHEUMATIC FEVER:

Morbidity from rheumatic fever decreased to 0.4 per thousand from 0.5 in the last three months. The First Service Command continued to report the highest morbidity from this cause (1.1 per thousand).

TUBERCULOSIS:

Morbidity from tuberculosis was reported at 3.2 per thousand in November a sharp increase from the rate of 2.5 per thousand in October. The current relatively high level arises in large part as the result of examinations at separation centers which tend to uncover cases which otherwise would be undetected. The rate at stations other than separation centers was 2.3 per thousand in November, as compared with 1.7 in October; however, many stations other than separation centers examined and discharged large numbers of troops in November.

As of 30 November there were 2806 cases of tuberculosis remaining under treatment, representing 1.5 percent of all patients in hospitals. Of the total cases, 1187 were at Fitzsimons General Hospital and 761 at Bruns General Hospital.

MALARIA:

Morbidity from malaria acquired inside the United States remained at 0.1 per thousand in November. The number of cases presumably acquired outside the United States, which were admitted (or readmitted) for treatment in this country averaged about 345 per week, which is the lowest figure so far recorded this year.

As of 30 November there were 950 cases of malaria under treatment, representing 0.5 percent of all patients in hospital. Of these, 8 cases were acquired in this country.

COMMENT ON RECENT DEVELOPMENTS (CONT.)

NEUROPSYCHIATRIC DISORDERS:

The annual rate of admission for neuropsychiatric disorders remained at 22.8 in November, which is the lowest rate reported since December 1943.

During November there was an average of 1675 CDD's per week given to enlisted men classified as neuropsychiatric cases, much lower than the weekly average for October (2564 CDD's per week). The CDD's in November for men with neuropsychiatric disorders represented 20 percent of all CDD's, as compared with 23 percent in October.

The number of neuropsychiatric cases remaining under treatment as of 30 November was 13,947 or about 5500 less than at the end of October. During November the number of locked ward cases decreased by about 700 to 3122 while open ward cases decreased by 31 percent. Neuropsychiatric cases remaining represented 7.5 percent of all patients in hospital.

MORTALITY:

Mortality from all causes during November was reported at 1.66 per year per thousand strength. The mortality rate from disease was 0.75 per thousand in November while the reported mortality rate from injury decreased from 0.88 per thousand to 0.84 per thousand.

It should be noted that the reporting of deaths on Forms WD AGO 8-122 is not complete, particularly for deaths from injury, for which the understatement may be as great as 10 percent (see Special Report on Deaths in 1944 in Weekly Health Report, Vol. V, #27). The mortality rate from injury when adjusted to allow for this under-reporting is about 9.2 per thousand, resulting in an estimated total death rate from all causes of 1.61 per thousand.

NONEFFECTIVE RATE:

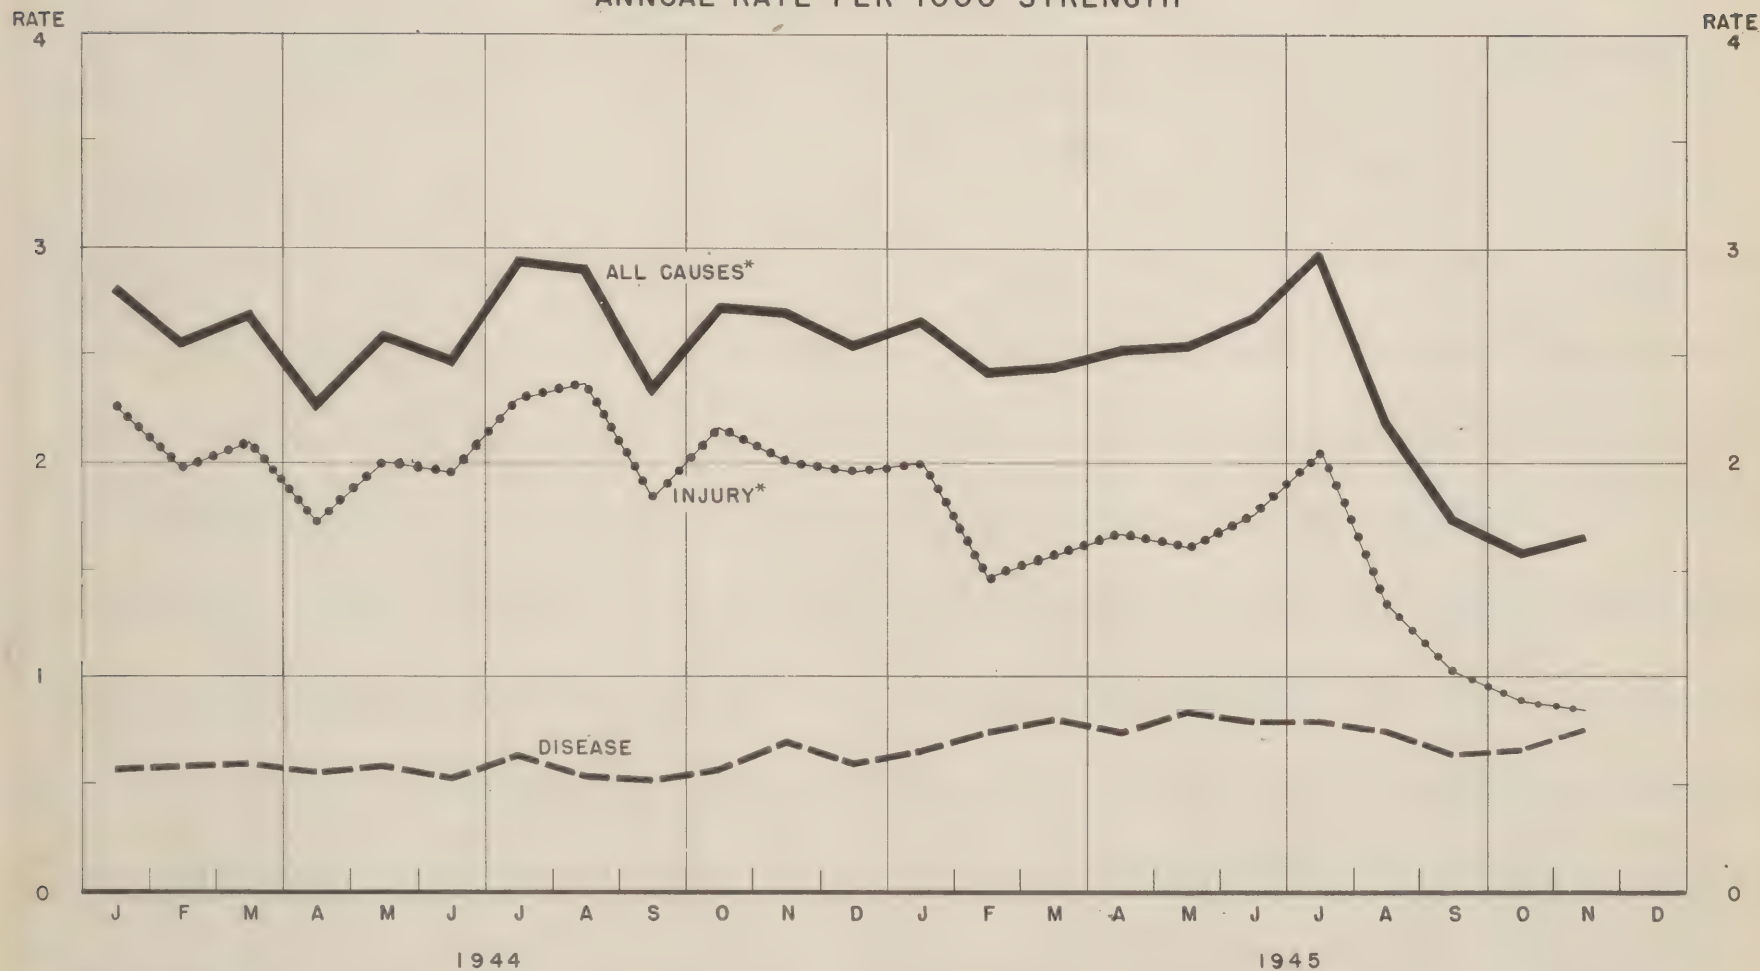

The noneffective rate for Army personnel stationed in this country was about 30.7 per thousand in November, as compared with 28 per thousand reported for October.
